Ria Kapoor

Backend Engineer | Bengaluru | +91 90000 00000 | ria.kapoor@example.com | example.com/ria

Summary

Backend engineer with five years on high-volume order systems. I make retries safe, keep money and records reconciled, and lead calmly when production breaks. Looking for a senior role where correctness of every rupee is the job.

Experience

Backend Engineer II | Tiffinly, Bengaluru — Jul 2023 – Present

- Own the order-dispatch service that assigns riders to orders in 14 cities, built on Python, PostgreSQL, Redis and Kafka on AWS.
- Ended duplicate rider assignments during network timeouts by adding idempotency keys under a unique constraint to every assignment retry.
- Built the nightly reconciliation of rider payouts against the payouts ledger; every mismatch opens a ticket with the rider and the amount.
- Led the incident response for the Diwali-eve dispatch backlog, then wrote the postmortem and the Kafka consumer backpressure fix.
- Cut p99 latency of the assignment API from 900 ms to 240 ms by moving rider lookups to a Redis geo index.

Backend Engineer I | Tiffinly, Bengaluru — Jul 2021 – Jun 2023

- Built the refund flow for cancelled orders, including partial refunds when only some items were cancelled.
- Joined the on-call rotation in month six and wrote four of the team’s runbooks.

Skills

Languages: Python, SQL
Data: PostgreSQL, Redis, Kafka
Cloud and operations: AWS (ECS, RDS, SQS), Docker, Grafana, PagerDuty

Education

B.Tech, Computer Science, Example Institute of Technology — 2021

Professional Development

Go | Payment systems | Double-entry ledger design
